

DeLaval LVP Vacuum Pumps

More performance with lower cost CFM per horsepower, exclusive to DeLaval

- The LVP is a vacuum system built exclusively for DeLaval.
- The pump has time ported rotors and a "Q" quiet casting that provides more CFM per horsepower while still reducing the decibels up to 5dBA over traditional cylinders.
- The single piece rotor construction provides greater strength and rigidity, combined with a heavier casting allows tighter clearances which gives you greater efficiency. We also are able to have lower operating temperatures which enhance the life of the system.
- New dual splash lube provides reliable splash lubrication on both gear and drive ends for longer life.
- Up to 62% more sump capacity ensures a cool well lubricated system.
- Use the exclusive "VPC Multi-pump Control" to save KW hours all day long
