

DeLaval ID Systems

The optimal way to identify and trace animals

- Provides the ability to manage cows on an individual basis
- Ensures data accuracy and proper cow location in the parlor
- Available as walk-by portal ID on DeLaval parallel and herringbone parlors
- In addition to portal ID, walk by ID with first/last or gang confirmation, or in place ID is available on parallel parlors
- In place ID ensures correct cow ID by using proprietary software controls to eliminate the potential of cross reading cows in neighboring stall points
- PR3100HD rotaries use an ID reader mounted above the rail to ensure ID accuracy
